			<b>PRÁCTICA DE LABORATORIO</b>		
<b>CARRERA:</b> COMPUTACION			<b>ASIGNATURA:</b> PROGRAMCION APLICADA		
<b>NRO. PRÁCTICA:</b>	1.1	<b>TÍTULO PROYECTO:</b> Prueba Practica 1  Desarrollo e implementación de un sistema de gestión de matrimonios de la ciudad de Cuenca			
<b>OBJETIVO ALCANZADO:</b>  Reforzar los conocimientos adquiridos en clase sobre la programación aplicada (Java 8, Programación genérica, Reflexión y Patrones de Diseño) en un contexto real.					
<b>ACTIVIDADES DESARROLLADAS</b>					
<b>1. Realizar el diagrama de clase y el programa para gestionar los matrimonios de la ciudad de Cuenca empleando las diferentes técnicas de programación revisadas en clase.</b>  Link GitHub:  <a href="https://github.com/adolfojara10/Practicas-de-programacion-aplicada/tree/master">https://github.com/adolfojara10/Practicas-de-programacion-aplicada/tree/master</a>  Primero se presentará el diagrama de clases. Se adjunta la foto, pero también se la subirá al github para una mejor visualización de ella.					

## 2. Informe de Actividades:

### • Planteamiento y descripción del problema.

Problema: De cada matrimonio se almacena la fecha, el lugar de la celebración y los datos personales (nombre, apellido, cédula, dirección, género y fecha de nacimiento) de los contrayentes. Es importante validar la equidad de género.

Igualmente se guardar los datos personales de los dos testigos y de la autoridad civil (juez o autoridad) que formalizan el acto. Además de gestionar la seguridad a través de un sistema de Usuarios y Autentificación.

### • Diagramas de Clases.

El diagrama se adjunto en el apartado anterior y también en el github.

### • Patron de diseño aplicado

	VICERRECTORADO DOCENTE	Código: GUIA-PRL-001

Formato: Guía de Práctica de Laboratorio / Talleres / Centros de Simulación		

Se aplicaron 2 patrones de diseño:

1. Factory Method()

Este método se lo utilizo en la clases abstracta del controlador en el método generarID(). Es método abstracto que se lo pasa a los controladores de Persona, Matrimonio, Administrador. En cada uno de los controladores anteriores se sobrescriben esos métodos.

A continuación, pantallazos de eso:

```
public abstract class Controlador<T> {

    private List<T> listaGenerica;
    private String ruta;

    public Controlador(String ruta) {
        listaGenerica = new ArrayList<>();
        this.ruta = ruta;
        this.cargarDatos();
    }

    public abstract int generarID();
}
```

```
public class ControladorAdministrador extends Controlador{

    //private Administrador instance;

    public ControladorAdministrador(String ruta) {
        super(ruta);
    }

    @Override
    public int generarID() {
        if (super.getListaGenerica().isEmpty()) {
            return 1;
        } else {
            return (super.getListaGenerica().size() + 1);
        }
    }
}
```

```
public class ControladorMatrimonio extends Controlador{

    public ControladorMatrimonio(String ruta) {
        super(ruta);
    }

    @Override
    public int generarID() {
        if (super.getListaGenerica().isEmpty()) {
            return 1;
        } else {
            return (super.getListaGenerica().size() + 1);
        }
    }
}
```

```
public class ControladorPersona extends Controlador {

    public ControladorPersona(String ruta) {
        super(ruta);
    }

    @Override
    public int generarID() {
        if (super.getListaGenerica().isEmpty()) {
            return 1;
        } else {
            return (super.getListaGenerica().size() + 1);
        }
    }
}
```

Como podemos ver declaramos un método y lo pasamos a las demás clases para que lo utilicen, siendo esta la definición de este patrón de diseño.

## 2. Singleton.

Este patrón nos asegura la unicidad de una clase. Este patrón fue implementado en la clase Administrador para que solo inicie sesión una persona Administrador. Si hace el log in, las demás ventanas se le activaran, caso contrario no podrá utilizar la aplicación.

A continuación, pantallazos del código:

```
public class Administrador extends Persona implements Serializable {

    private static final long serialVersionUID = 6529685098267757690L;

    private String email;
    private String password;
    public static Administrador instance;

    private Administrador(int id, String nombre, String apellido, String cedula, String genero,
        Direccion direccion, Date fechaNacimiento, String email, String password) {
        super(id, nombre, apellido, cedula, genero, direccion, fechaNacimiento);
        this.email = email;
        this.password = password;
    }
}
```

```
public static Administrador getInstance() {
    if (Administrador.instance == null) {
        Constructor<Administrador> constructor;
        try {
            constructor = Administrador.class.getDeclaredConstructor();
            constructor.setAccessible(true);
            Administrador admin = constructor.newInstance();

            Administrador.instance = admin;

            return Administrador.instance;
        } catch (Exception e) {
            e.printStackTrace();
        }
        //.instance = new Administrador(1, "", "", "", "", "", "", "", "");

        return Administrador.instance;
    }

    return Administrador.instance;
}
```

Como podemos ver, el constructor es privado y nos creamos un atributo estático instance de la misma clase. Este nos sirve para saber si hay o no un usuario iniciado sesión. Ahora la foto del controlador del administrador y del método log in donde se lo implementa:

	VICERRECTORADO DOCENTE	Código: GUIA-PRL-001
	CONSEJO ACADÉMICO	Aprobación: 2016/04/06
Formato: Guía de Práctica de Laboratorio / Talleres / Centros de Simulación		

```

public Administrador login(String email, String password){
    List<Administrador> listaAdmins = (List<Administrador>) List.copyOf(super.getListGenerica());

    System.out.println(listaAdmins);
    System.out.println(listaAdmins.size());

    Administrador administradorLogeado = listaAdmins.stream().filter(ad -> ad.getEmail().equals(email) &&
        ad.getPassword().equals(password)).findFirst().get();

    if(administradorLogeado != null){
        return Administrador.getInstance();
    } else {
        return null;
    }
}

```

### 3. Reflexión.

Está se la utilizó para poder acceder al método constructor de un administrador al momento de crear uno nuevo, o al momento de actualizarlo o eliminarlo. Esto fue muy útil ya que el método constructor es privado, por lo que era necesario aplicar este tema visto en la unidad 1.

Primero vamos a ver cuando se crea un nuevo administrador:

```

try {
    Constructor<Administrador> constructor = Administrador.class.getDeclaredConstructor();
    constructor.setAccessible(true);
    Administrador admin = constructor.newInstance();

    admin.setId(controladorAdministrador.generarID());
    admin.setNombre(nombre);
    admin.setApellido(apellido);
    admin.setCedula(cedula);
    admin.setGenero(genero);
    admin.setFechaNacimiento(fechaNacimiento);
    admin.setDireccion(direccion);
    admin.setEmail(email);
    admin.setPassword(password);

    if (controladorAdministrador.create(admin)) {
        JOptionPane.showMessageDialog(this, "Administrador creado con éxito", "Mensaje", JOptionPane.INFORMATION_MESSAGE);
    } else {
        JOptionPane.showMessageDialog(this, "Administrador ya existente", "Error", JOptionPane.ERROR_MESSAGE);
    }

} catch (IllegalAccessException e) {
    e.printStackTrace();
}

```

Cuando actualizamos:

```
try {
    Constructor<Administrador> constructor = Administrador.class.getDeclaredConstructor();
    constructor.setAccessible(true);
    Administrador admin = constructor.newInstance();

    admin.setId(controladorAdministrador.generarID());
    admin.setNombre(nombre);
    admin.setApellido(apellido);
    admin.setCedula(cedula);
    admin.setGenero(genero);
    admin.setFechaNacimiento(fechaNacimiento);
    admin.setDireccion(direccion);
    admin.setEmail(email);
    admin.setPassword(password);

    controladorAdministrador.update(admin, admin);
    JOptionPane.showMessageDialog(this, "Administrador actualizado con éxito", "Mensaje", JOptionPane.
llenarTblAdministradores();
    inicioBotones();

} catch (IllegalAccessException e) {
    e.printStackTrace();
} catch (InstantiationException ex) {
    Logger.getLogger(VentanaCrearAdministrador.class.getName()).log(Level.SEVERE, null, ex);
} catch (IllegalArgumentException ex) {
    Logger.getLogger(VentanaCrearAdministrador.class.getName()).log(Level.SEVERE, null, ex);
} catch (InvocationTargetException ex) {
    Logger.getLogger(VentanaCrearAdministrador.class.getName()).log(Level.SEVERE, null, ex);
}
```

Cuando eliminamos:

```
try {
    Constructor<Administrador> constructor = Administrador.class.getDeclaredConstructor();
    constructor.setAccessible(true);
    Administrador admin = constructor.newInstance();

    admin.setCedula((String) txtFormattedCedula.getValue());

    controladorAdministrador.delete(admin);
    JOptionPane.showMessageDialog(this, "Administrador eliminado con éxito", "Mensaje", JOptionPane.
    inicioBotones();
    llenarTblAdministradores();

} catch (IllegalAccessException e) {
    e.printStackTrace();
} catch (InstantiationException ex) {
    Logger.getLogger(VentanaCrearAdministrador.class.getName()).log(Level.SEVERE, null, ex);
} catch (IllegalArgumentException ex) {
    Logger.getLogger(VentanaCrearAdministrador.class.getName()).log(Level.SEVERE, null, ex);
} catch (InvocationTargetException ex) {
    Logger.getLogger(VentanaCrearAdministrador.class.getName()).log(Level.SEVERE, null, ex);
} catch (NoSuchMethodException ex) {
    Logger.getLogger(VentanaCrearAdministrador.class.getName()).log(Level.SEVERE, null, ex);
} catch (SecurityException ex) {
    Logger.getLogger(VentanaCrearAdministrador.class.getName()).log(Level.SEVERE, null, ex);
}
```

#### 4. Programación genérica.

Esto nos sirve en la clase controlador para ahorrar muchas líneas de código. Se adjunta el código de la clase Controlador:

	VICERRECTORADO DOCENTE	Código: GUIA-PRL-001
	CONSEJO ACADÉMICO	Aprobación: 2016/04/06
Formato: Guía de Práctica de Laboratorio / Talleres / Centros de Simulación		

```

}

#### • Descripción de la solución y pasos seguidos.

Para solucionar el problema planteado para esta prueba se crearon los siguientes paquetes y clases:

Vamos a comenzar con las clases del paquete modelo. Primero la clase Dirección, la cual tiene una relación con Persona:

```
/*
 * To change this license header, choose License Headers in Project Properties.
 * To change this template file, choose Tools | Templates
 * and open the template in the editor.
 */
package ups.edu.ec.modelo;

import java.io.Serializable;
```

	VICERRECTORADO DOCENTE	Código: GUIA-PRL-001
	CONSEJO ACADÉMICO	Aprobación: 2016/04/06
Formato: Guía de Práctica de Laboratorio / Talleres / Centros de Simulación		

```

/**
 *
 * @author User
 */
public class Direccion implements Serializable{

    private static final long serialVersionUID = 6529685098267757692L;

    private String calle1;
    private String calle2;
    private String numeroCalle;

    public Direccion(String calle1, String calle2, String numeroCalle) {
        this.calle1 = calle1;
        this.calle2 = calle2;
        this.numeroCalle = numeroCalle;
    }

    public String getCalle1() {
        return calle1;
    }

    public void setCalle1(String calle1) {
        this.calle1 = calle1;
    }

    public String getCalle2() {
        return calle2;
    }

    public void setCalle2(String calle2) {
        this.calle2 = calle2;
    }

    public String getNumeroCalle() {
        return numeroCalle;
    }

    public void setNumeroCalle(String numeroCalle) {
        this.numeroCalle = numeroCalle;
    }

    @Override
    public String toString() {
        return "Direccion:" + "calle1=" + calle1 + ", calle2=" + calle2 + ", numeroCalle=" + numeroCalle;
    }
}

```

Crear

Cancelar

Mensaje

Administrador creado con exito

OK

Ahora demostraremos que si no iniciamos sesión no podemos abrir otra ventana:

	VICERRECTORADO DOCENTE	Código: GUIA-PRL-001
	CONSEJO ACADÉMICO	Aprobación: 2016/04/06
Formato: Guía de Práctica de Laboratorio / Talleres / Centros de Simulación		

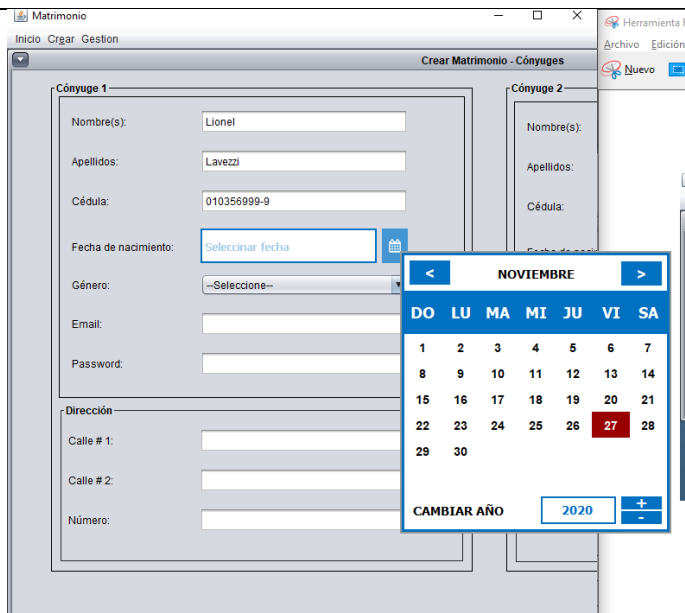

Ahora iniciamos sesión:

Ahora vamos a crear un matrimonio, para esto usamos una librería investigada en internet y nos sale el calendario para escoger la fecha y le da un mejor toque atractivo a la aplicación:

**Crear Matrimonio - Cónyuges**

**Cónyuge 1**

Nombre(s): Lionel

Apellidos: Lavezzi

Cédula: 010356999-9

Fecha de nacimiento:

Género:

Email:

Password:

**Dirección**

Calle # 1:

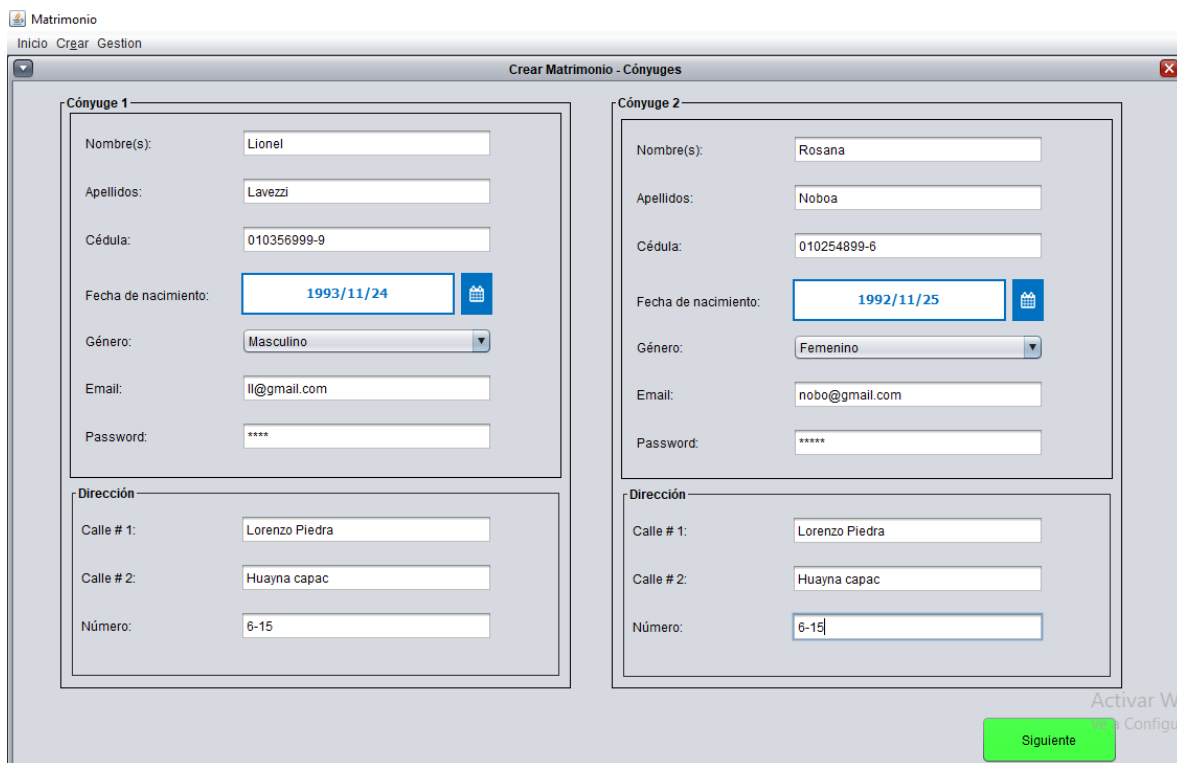

Calle # 2:

Número:

**Calendar (NOVIEMBRE):**

DO	LU	MA	MI	JU	VI	SA
1	2	3	4	5	6	7
8	9	10	11	12	13	14
15	16	17	18	19	20	21
22	23	24	25	26	27	28
29	30					

CAMBIAR AÑO:

**Crear Matrimonio - Cónyuges**

**Cónyuge 1**

Nombre(s): Lionel

Ve a Cont

**Siguiente**

Se aplasta el botón siguiente y nos dirigirá a crear un juez:

Matrimonio

Inicio Crear Gestion

Crear Matrimonio - Juez

Nombre(s): Jose

Apellidos: Vintimilla

Cédula: 001013521-6

Fecha de nacimiento: 1978/11/29

Género: Masculino

Email: pepe@hotmail.com

Password: \*\*\*\*\*

Dirección

Calle # 1: Loja

Calle # 2: 12 de abril

Número: 5-45

Finalizar

Ahora aplastamos en finalizar y un matrimonio ha sido completado. Para comprobar, vamos a gestión matrimonios:

	VICERRECTORADO DOCENTE	Código: GUIA-PRL-001
	CONSEJO ACADÉMICO	Aprobación: 2016/04/06
Formato: Guía de Práctica de Laboratorio / Talleres / Centros de Simulación		

Matrimonio

Inicio Crear Gestion

Numero Matrimonio:

ID	Fecha	Cónyuges	Testigos	Juez
1	Fri Nov 27 21:05:59 ECT 2020	Lionel Lavezzi, Rosana Noboa,	Moises Corozo, Franklin Guerr...	Jose Vintimilla

Como podemos observar tenemos varios matrimonios ya que varios fueron de prueba.

Ahora para ver los administradores:

	VICERRECTORADO DOCENTE	Código: GUIA-PRL-001
	CONSEJO ACADÉMICO	Aprobación: 2016/04/06
Formato: Guía de Práctica de Laboratorio / Talleres / Centros de Simulación

### RESULTADO(S) OBTENIDO(S):

- Lograr aplicar y afianzar los conocimientos adquiridos en la unidad de la materia de Programación aplicada.
- Ampliar nuestro conocimiento sobre el mundo en Java.
- Construir una aplicación de la vida real.
- Utilizar archivos de objetos.
- Aplicar reflexión, programación genérica, avance en java.

### CONCLUSIONES:

- En conclusión, este trabajo ha sido de mucha ayuda para aplicar los patrones aprendidos en clase, y además poder aplicar todo lo aprendido en la unidad número 1. Esto también me ha ayudado para prepararme para el examen Inter ciclo.
