PRÁCTICA DE LABORATORIO

CARRERA: COMPUTACION		ASIGNATURA: PROGRAMACION APLICADA
NRO. PRÁCTICA:	1.1	TÍTULO PRÁCTICA : TÍTULO PROYECTO: Proyecto Integrador Inter ciclo. Desarrollo e implementación de un sistema de gestión de datos del parqueadero de la empresa EMOV-EC.

OBJETIVO ALCANZADO:

Reforzar los conocimientos adquiridos en clase sobre la programación aplicada (POO, Interfaz gráfica, etc) en un contexto real.

ACTIVIDADES DESARROLLADAS

 Investigue, diseñe y desarrolle e implemente un sistema informático que permita gestionar los espacios de parqueo de la empresa EMOV-EC del cancho del parque de la Madre que tiene una capacidad de más de 50 estacionamientos.

Link GitHub:

https://github.com/adolfojara10/Practicas-de-programacion-aplicada

Link página web:

Para la solución de este problema se planteó la siguiente resolución:

Primero, se generó el diagrama UML. Esté será subido al repositorio de github para una mejor comprensión de este, ya que la imagen es muy grande para un documento de Word. En este diagrama se planteó las siguientes clases del paquete modelo:

- Administrador: esté es el encargado de poder gestionar la aplicación del parqueadero. Existen 2 tipos: Completo y Simple. El completo puede crear administradores simples, pero lo simples no. Esto se los diferenció con un Enum Class. Además, esta clase hereda los atributos de la clase padre Persona.
- Cliente: esté sirve para crear un cliente que entra al parqueadero. También para la factura, contrato
- Contrato: esté sirve para cuando un cliente quiere ya tener reservado por un tiempo definido un parqueadero. Aquí se guardan los datos de un cliente, un sitio de parqueadero, fecha de inicio y de fin, el subtotal, total, si se aplica descuento o no, y si paga por adelantado el contrato. Este contrato guarda una variable de tipo Enum Class para saber si se cobra por día, semana o mes.
- Factura: esta clase nos sirve para emitir facturas para clientes que solamente entran al parqueadero ese día y salen el mismo día. Esto nos sirve para tener por separado a clientes por contrato y a clientes ocasionales. Al igual que en el contrato, esta cuenta con un cliente, un sitio,

CONSEJO ACADÉMICO

Código: GUIA-PRL-001

Aprobación: 2016/04/06

Formato: Guía de Práctica de Laboratorio / Talleres / Centros de Simulación

la fecha de entrada y salida, el tiempo que estuvo parqueado, el subtotal, el total, si se aplica descuento o no.

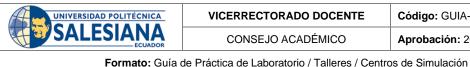

- Persona: esta clase fue creada para heredar tanto a la clase cliente y administrador. Esto nos sirve para reutilizar código.
- Sitio: esta clase representa como es un espacio en un parqueadero, esta cuenta con código, un Emun Class que nos sirve para cambiarle de estados al sitio entre ocupado, desocupado y contratado, y, por último, un precio que se cobra cada intervalo de 10 minutos.

Para el paquete controlador se generaron las siguientes clases:

- Controlador: esta clase es abstracta. Hereda a los demás controladores del paquete. Aquí se generan los métodos CRUD y el findAll de la lista en la que se guardan los objetos.
- ControladorAdministrador: esta hereda del Controlador, y además tiene 5 métodos propios: iniciarSesion() el cual nos sirve para leer los datos que alguien intenta iniciar sesión en la aplicación y devolver el usuario encontrado; encriptarPassword() nos sirve para encriptar la contraseña de un usuario y que así no sea visible; y por ultimo desencriptarPassword() nos sirve para desencriptar una contraseña de algún usuario, getLongitud() para generar el ID del nuevo administrador, y validarEmail() que nos sirve para comprobar una dirección de correo electrónico sea la correcta. Nos sirve para manipular los objetos de tipo Administrador.
- ControladorCliente: cuenta con el método findByCedula() que sirve para encontrar a un cliente por sus cédula. Nos sirve para manipular los objetos de tipo Cliente.
- ControladorContrato: esta clase tiene 3 métodos propios: obtenerSubtotal() que nos sirve para calcular el subtotal de un contrato, obtenerTotal() que nos sirve para calcular el total de un contrato. Nos sirve para manipular los objetos de tipo Contrato.
- ControladorFactura: esta clase cuenta con 4 métodos propios: calcularSubtotal() que nos sirve para calcular el subtotal de una factura; calcularTiempo() que nos sirve para calcular el tiempo que una persona uso un sitio del parqueadero; y por último calcularTotal() que nos sirve para calcular el valor total a pagar. Nos sirve para manipular los objetos de tipo Factura.
- ControladorSitio: esta clase cuenta con 5 métodos: cargarSitios() que nos sirve para crear los sitios solamente al
 inicio del programa; encontrarSitioDesocupado() que nos sirve para encontrar un sitio desocupado y asignarle a un
 cliente; cambiarAEstadoOcuapdo() que nos sirve para cambiar el Enum Class de un sitio del parqueadero a ocupado;
 cambiarAEstadoDesocupado()que nos sirve para cambiar el Enum Class de un sitio del parqueadero a desocupado;
 cambiarAEstadoContratado()que nos sirve para cambiar el Enum Class de un sitio del parqueadero a contratado.
 Nos sirve para manipular los objetos de tipo Sitio.
- ControladorVehiculo: que nos sirve para manipular los datos de los Vehiculos.

Luego continuamos con el paquete vista, en este se crearon las siguientes ventanas:

- VentanaPrincipal: es la ventana con la que se inicializa el proyecto y que guarda a las demás ventanas.
- VentanaContrato: es la ventana encargada de mostrar los elementos de un contrato y además de mostrar los registros de todos los contratos.
- VentanaCrearCliente: es la ventana encargada de los clientes, se puede realizar todos los métodos crud sobre él.
- VentanaCrearUsuario: sirve para manipular a los administradores de tipo Enum Class simple.
- VentanaEntradaTicket: sirve para emitir un ticket cuando un cliente ingresa al parqueadero.
- VentanaGestionFacturas: en esta ventana solo sirve para poder observar todas las facturas emitidas.
- VentanaLogIn: sirve para que un administrador pueda iniciar sesión.
- VentanaSalidaTicket: sirve para emitir una factura cuando un cliente está saliendo del parqueadero.

CONSEJO ACADÉMICO

Código: GUIA-PRL-001

Aprobación: 2016/04/06

Ventana Vehiculo: sirve para crear un vehículo y todo el crud sobre él.

- VentanaVisualizarFactura: sirve para visualizar los datos de la factura en un Jlist. esta factura también tiene la funcionalidad de guardar una factura para que posteriormente sea impresa.
- VentanaMoverCoche: sirve para visualizar como se parqueo un coche que recién llego al estacionamiento.

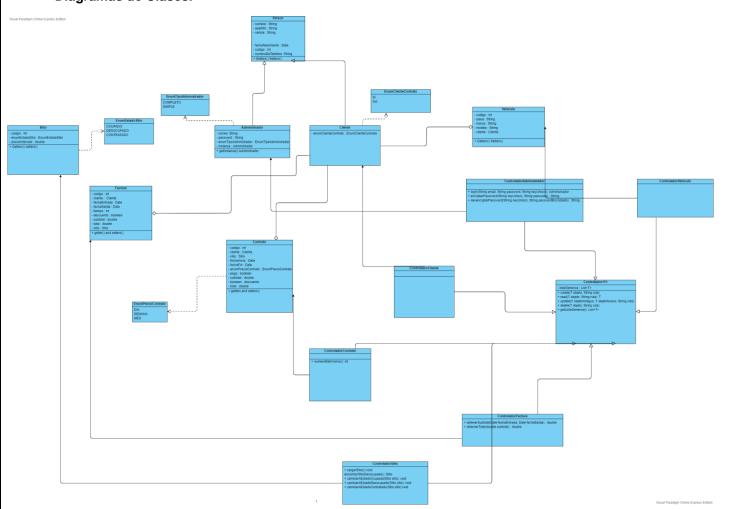

Paquete JPAUtils:

JPAUtils: nos sirve para crear un EntityManagerFactory y poder manejar la base de datos.

Paquete META-INF:

Persistence.xml: nos sirve para poder obtener información sobre conexión con la base de datos.

Diagramas de Clases.

CONSEJO ACADÉMICO

Aprobación: 2016/04/06

Formato: Guía de Práctica de Laboratorio / Talleres / Centros de Simulación

Este es el diagrama de clases utilizado para este proyecto. Esté será subido al repositorio de github para que pueda ser descargado y observado de una mejor manera.

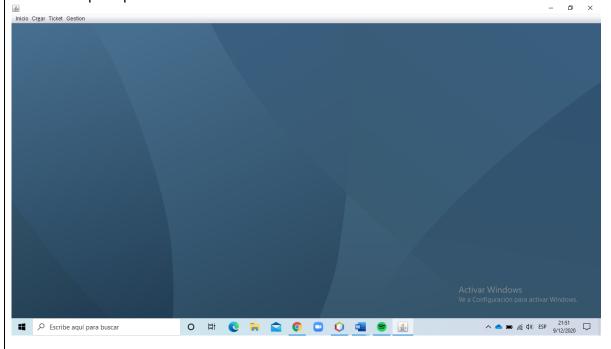

Descripción de la solución y pasos seguidos.

Lo primero que se hizo para resolver este problema fue hacer el diagrama UML. Como sea muestra, se definieron las clases que van a ser utilizadas en este proyecto. Esto facilita la codificación del proyecto. Una vez realizado eso, procedí a codificar primero las clases del paquete modelo. En este tramo de la resolución no tuve ningún inconveniente. Luego procedí a crear los controladores. En estos los cree de una manera simple, pero cuando procedí a crear las vistas me daba cuenta qué necesitaba añadir algunas funcionalidades extra a los controladores. Las ventanas fueron realizadas en base a las clases del modelo. Y estas se comunican con los controladores. Una vez terminado el proyecto se procedió a realizar varias pruebas para corregir los diversos errores que pueden existir en el proyecto. Una vez corregidos los errores, se procedió con la elaboración del informe y de la página web.

- Tutorial del uso del sistema (básico).
- Tutorial del uso del sistema (básico).

Presentación del sistema:

La ventana principal:

Para iniciar sesión:

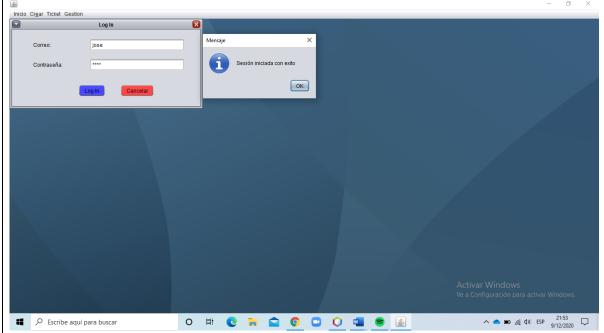

CONSEJO ACADÉMICO

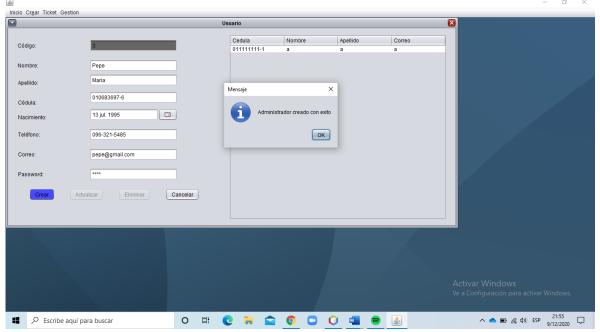

Código: GUIA-PRL-001

Aprobación: 2016/04/06

Formato: Guía de Práctica de Laboratorio / Talleres / Centros de Simulación

Se inició sesión con el administrador principal, esté es el único que puede crear a los demás administradores, pero estos no pueden ingresar a dicha ventana. A continuación, se mostrará la ventana para crear administradores:

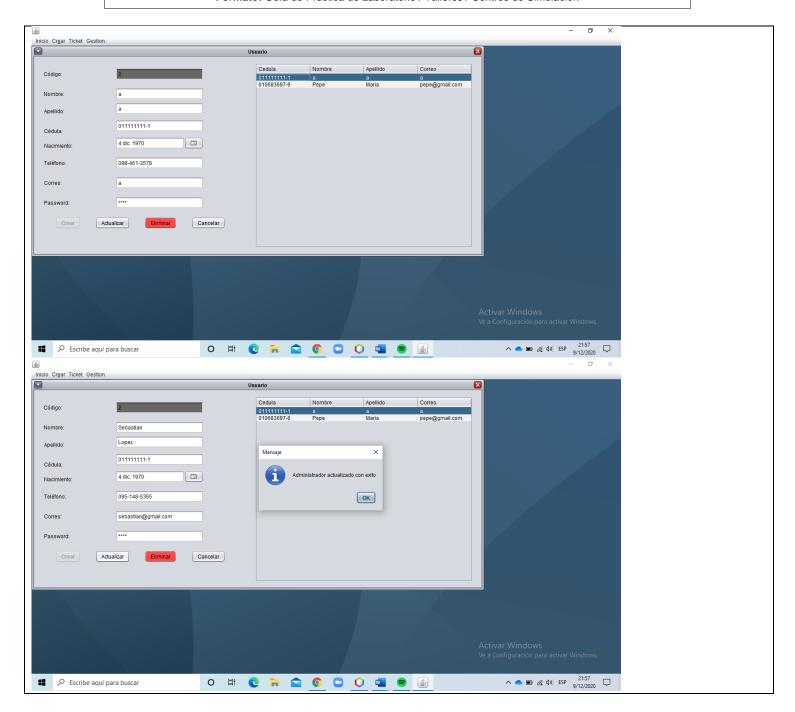

Una vez creado un administrador, procederemos a editar el otro administrador que está en la tabla, para eso damos click en el administrador y automáticamente nos cagan los datos para editarlos:

CONSEJO ACADÉMICO

Código: GUIA-PRL-001

Aprobación: 2016/04/06

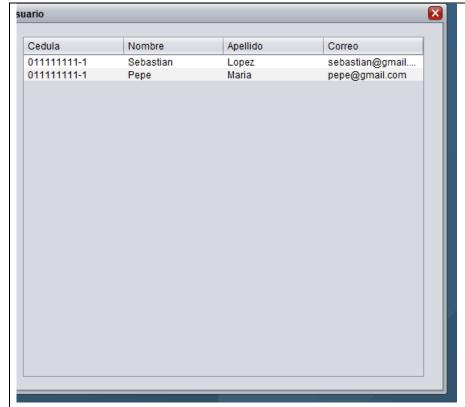

CONSEJO ACADÉMICO

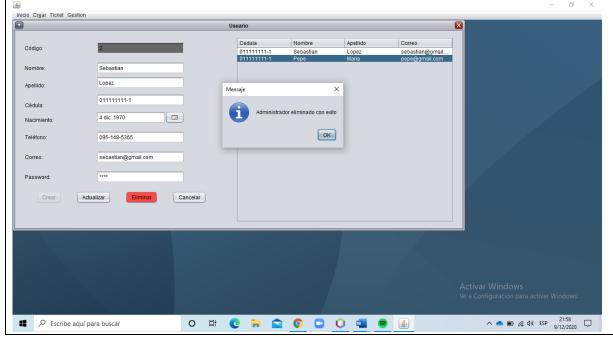

Código: GUIA-PRL-001

Aprobación: 2016/04/06

Formato: Guía de Práctica de Laboratorio / Talleres / Centros de Simulación

Ahora eliminaremos al segundo administrador, para esto se da click en el administrador en la tabla y presionamos el botón eliminar:

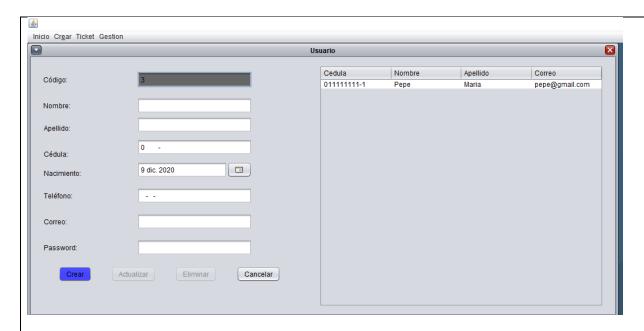

CONSEJO ACADÉMICO

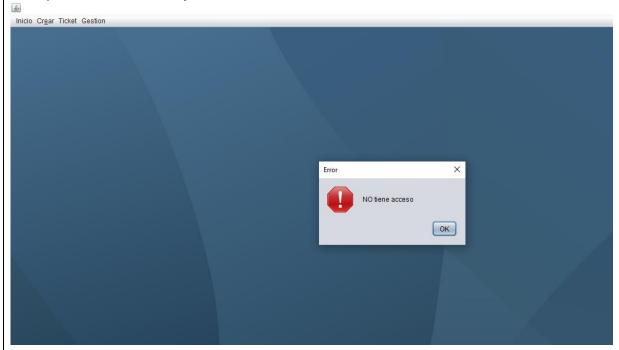

Código: GUIA-PRL-001

Aprobación: 2016/04/06

Formato: Guía de Práctica de Laboratorio / Talleres / Centros de Simulación

Ahora procedemos a iniciar sesión con un administrador simple e intentamos abrir la misma ventana y nos aparecerá este mensaje:

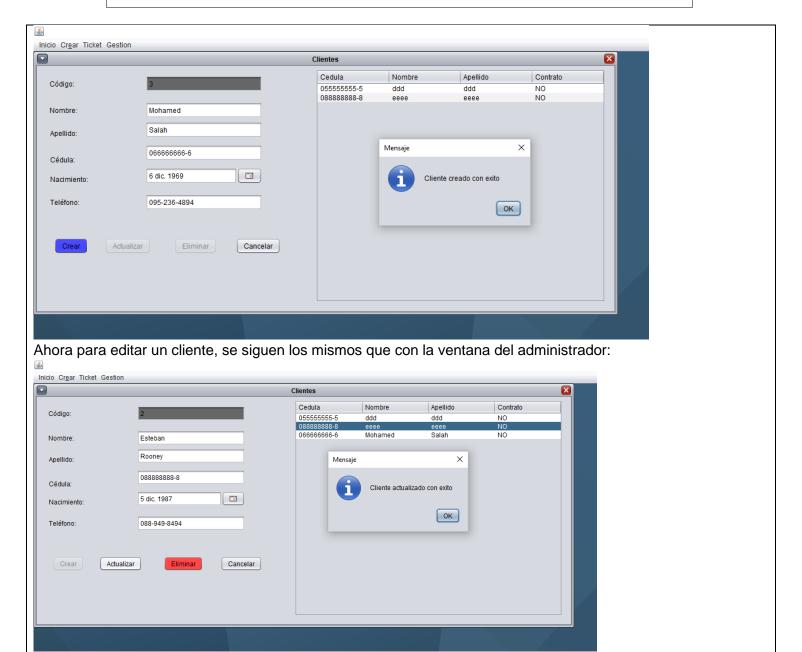

Ahora procedemos a crear un Cliente:

CONSEJO ACADÉMICO

Código: GUIA-PRL-001

Aprobación: 2016/04/06

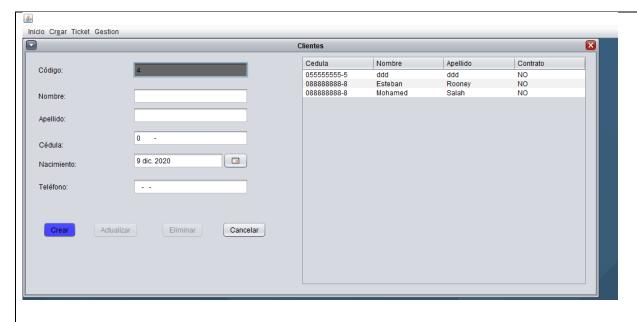

CONSEJO ACADÉMICO

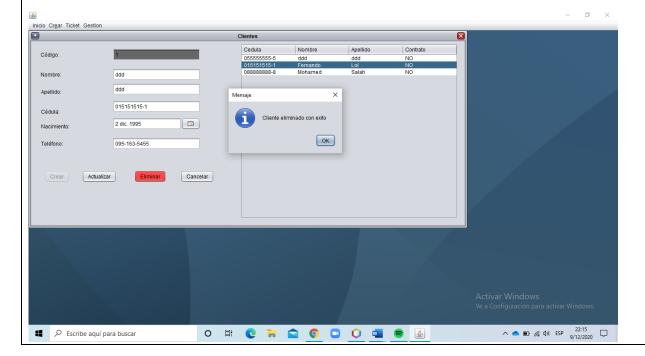

Código: GUIA-PRL-001

Aprobación: 2016/04/06

Formato: Guía de Práctica de Laboratorio / Talleres / Centros de Simulación

Ahora eliminaremos un cliente, y se siguen los mismos pasos que con el administrador:

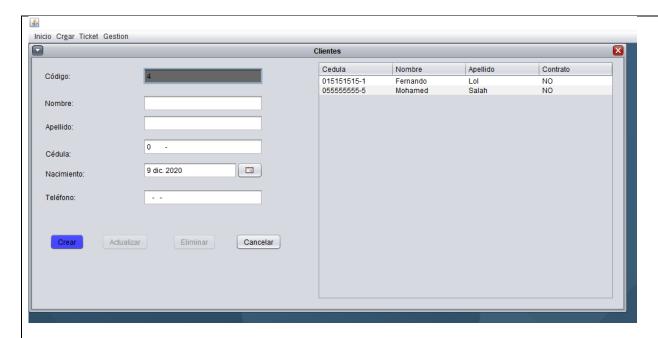

CONSEJO ACADÉMICO

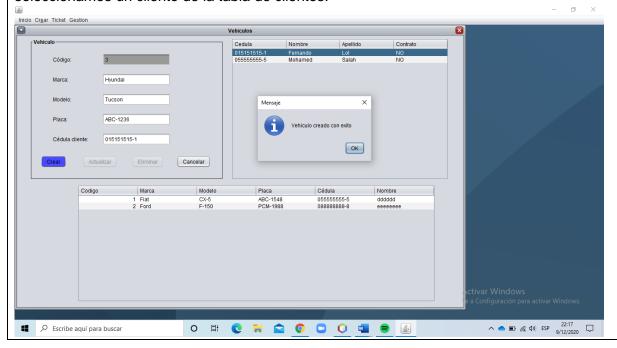

Código: GUIA-PRL-001

Aprobación: 2016/04/06

Formato: Guía de Práctica de Laboratorio / Talleres / Centros de Simulación

A continuación, se creará un vehículo, para esto ponemos las características del vehículo y seleccionamos un cliente de la tabla de clientes:

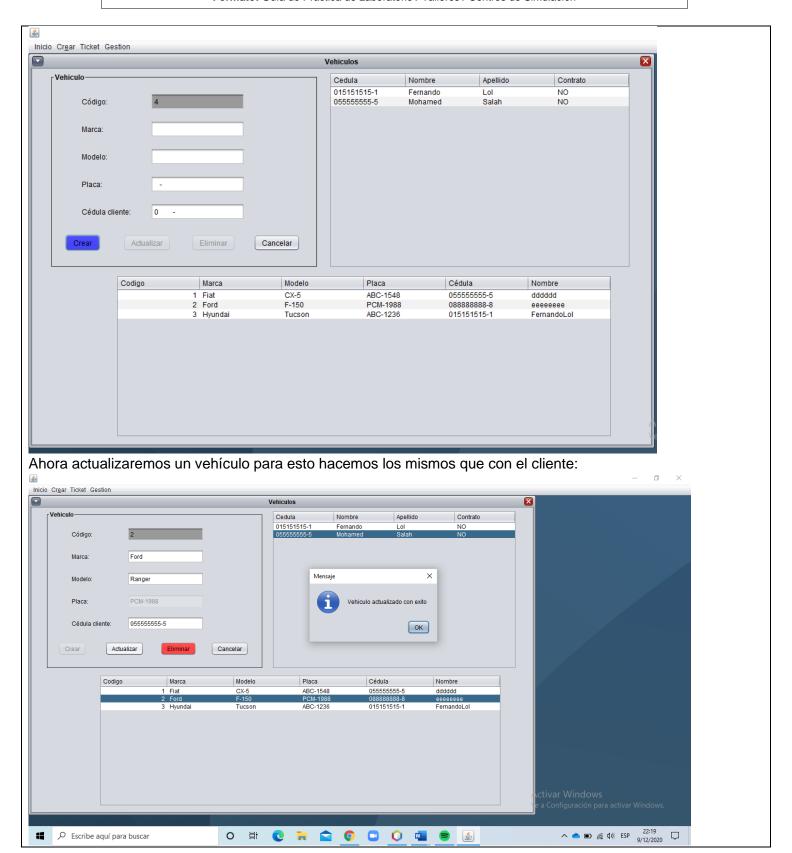

CONSEJO ACADÉMICO

Código: GUIA-PRL-001

Aprobación: 2016/04/06

Escribe aquí para buscar

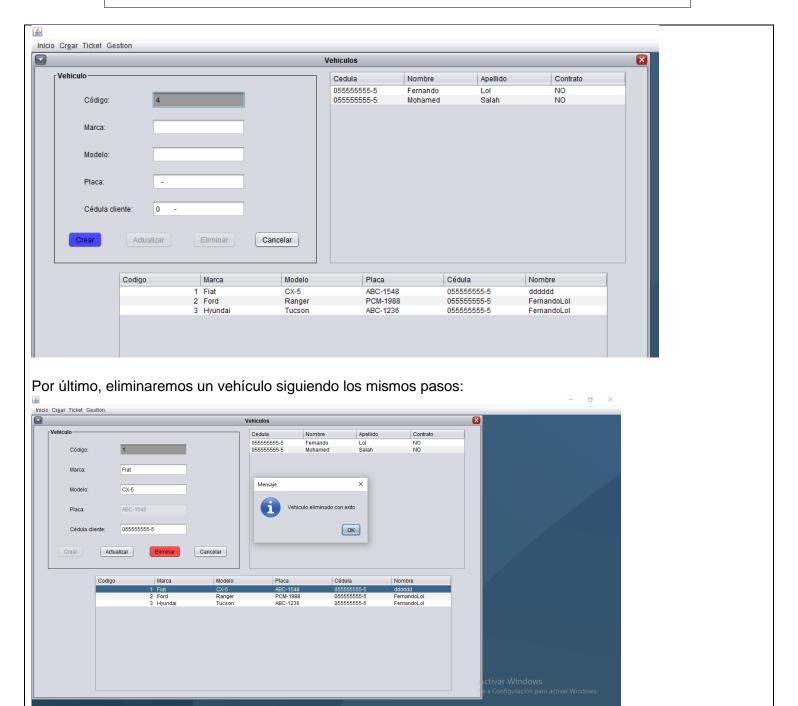

VICERRECTORADO DOCENTE

CONSEJO ACADÉMICO

Aprobación: 2016/04/06

CONSEJO ACADÉMICO

Código: GUIA-PRL-001

Aprobación: 2016/04/06

Formato: Guía de Práctica de Laboratorio / Talleres / Centros de Simulación

Para crear un contrato necesitamos llenar los siguientes datos como se muestra en la imagen. Siempre se da un descuento de 10% si escogen la opción descuento. El tipo de precio dependerá de la duración del contrato. La cedula del cliente se llena y automáticamente se cambiará el estado del cliente ya que tendrá un contrato, para esto lo mostraremos en la ventana del cliente:

Como podemos observar cambio su estado.

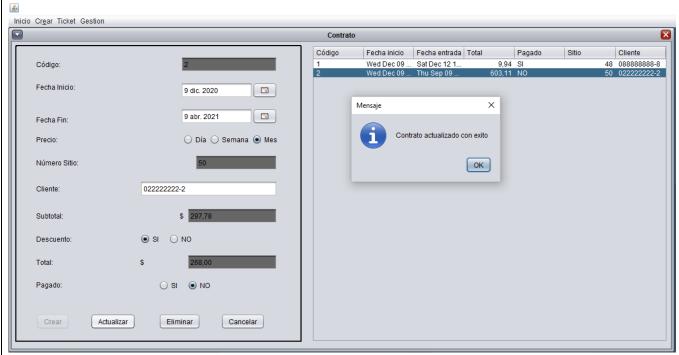

CONSEJO ACADÉMICO

Código: GUIA-PRL-001

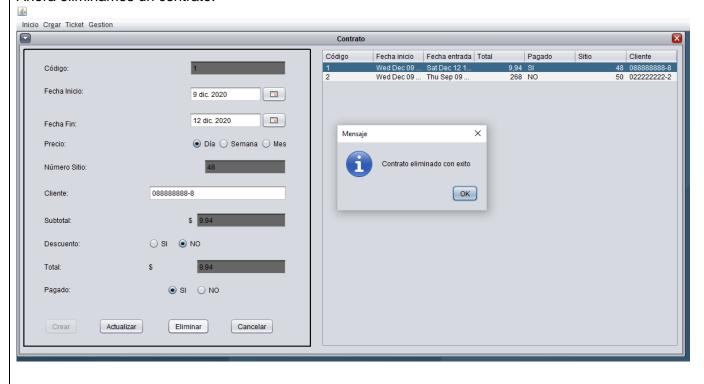

Aprobación: 2016/04/06

Formato: Guía de Práctica de Laboratorio / Talleres / Centros de Simulación

Ahora actualizaremos un contrato, se siguen los mismos que con el administrador y el cliente y el vehículo:

Ahora eliminamos un contrato:

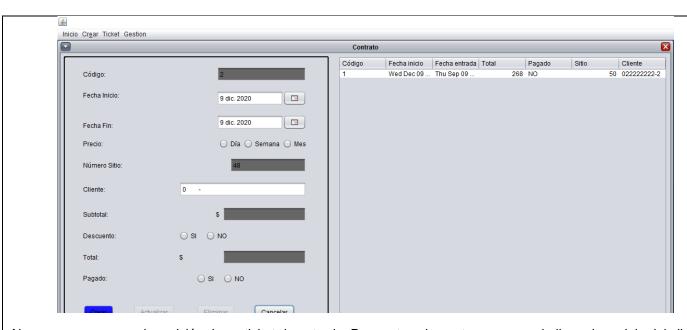

CONSEJO ACADÉMICO

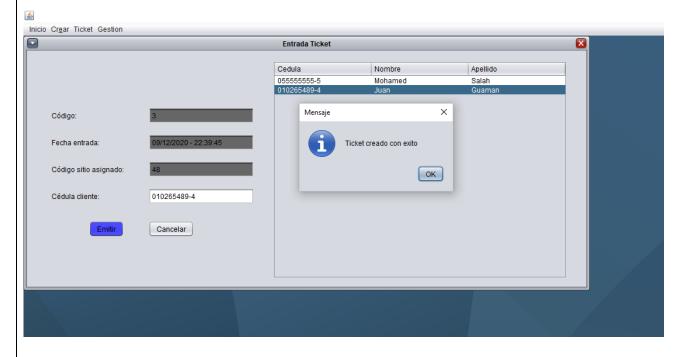

Código: GUIA-PRL-001

Aprobación: 2016/04/06

Formato: Guía de Práctica de Laboratorio / Talleres / Centros de Simulación

Ahora pasaremos con la emisión de un ticket de entrada. Para esto solamente es necesario llenar la cedula del cliente:

CONSEJO ACADÉMICO

Código: GUIA-PRL-001

Aprobación: 2016/04/06

CONSEJO ACADÉMICO

Código: GUIA-PRL-001

Aprobación: 2016/04/06

Formato: Guía de Práctica de Laboratorio / Talleres / Centros de Simulación

Cabe recalcar que los clientes que tienen contrato no aparecerán en la tabla de clientes de esta ventana.

Ahora emitiremos un ticket de salida:

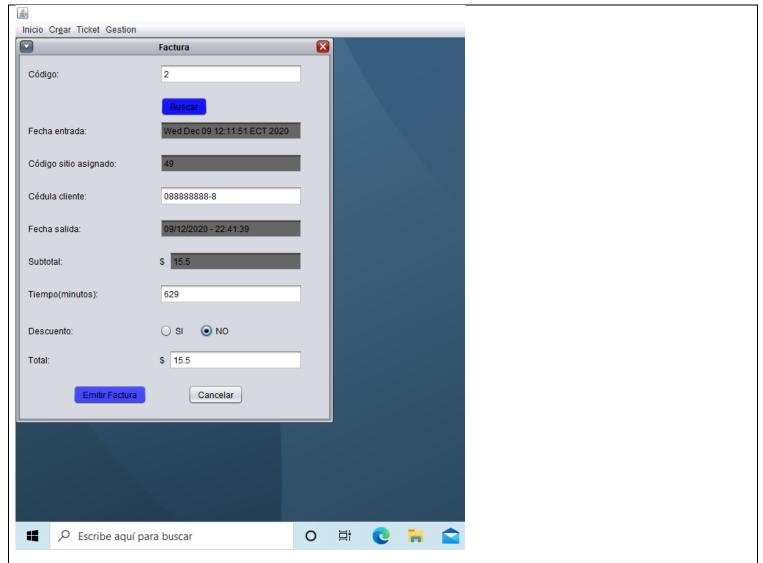

CONSEJO ACADÉMICO

Código: GUIA-PRL-001

Aprobación: 2016/04/06

Formato: Guía de Práctica de Laboratorio / Talleres / Centros de Simulación

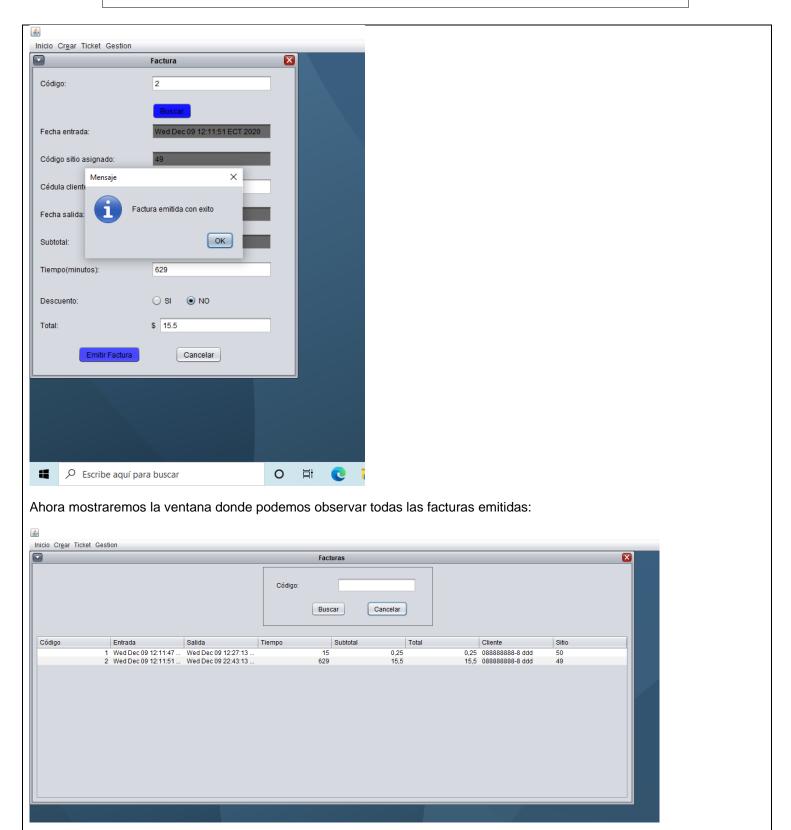

Para emitir la factura solamente es necesario escribir el código del ticket emitido de entrada y buscarlo. Luego seleccionaremos si podemos dar o no descuento.

CONSEJO ACADÉMICO

Código: GUIA-PRL-001

Aprobación: 2016/04/06

CONSEJO ACADÉMICO

Código: GUIA-PRL-001

Aprobación: 2016/04/06

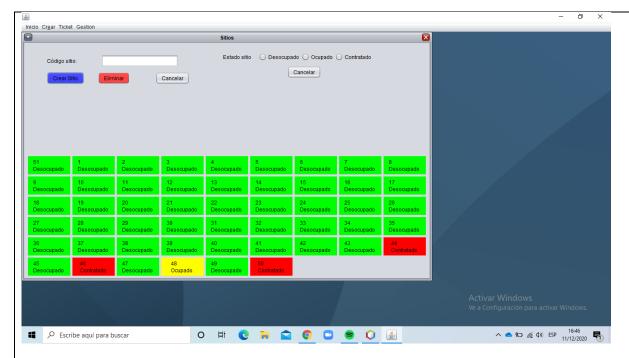

CONSEJO ACADÉMICO

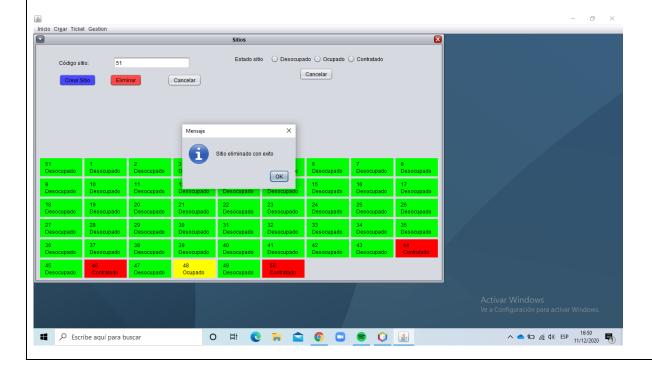

Código: GUIA-PRL-001

Aprobación: 2016/04/06

Formato: Guía de Práctica de Laboratorio / Talleres / Centros de Simulación

Ahora eliminaremos el mismo parqueadero que fue creado, para esto escribimos el número del sitio y aplastamos el botón eliminar:

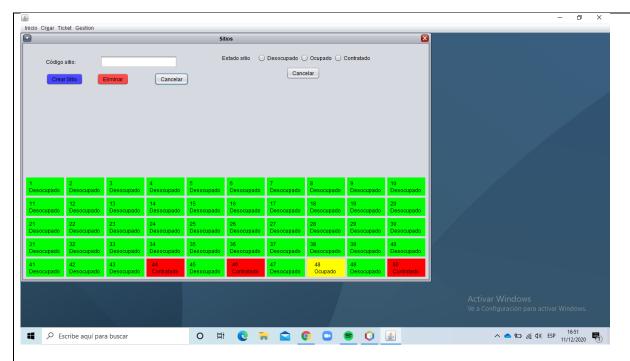

0.4.DÉ1.4100

Código: GUIA-PRL-001

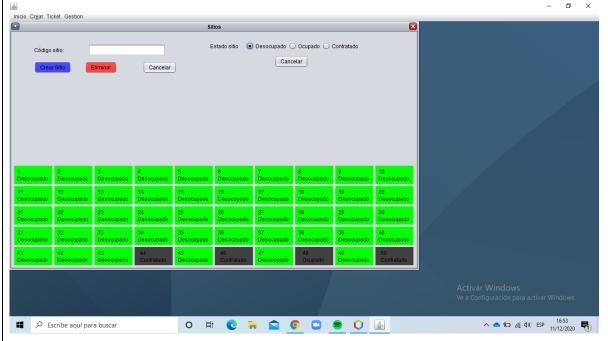

CONSEJO ACADÉMICO

Aprobación: 2016/04/06

Formato: Guía de Práctica de Laboratorio / Talleres / Centros de Simulación

Tenemos también opciones de filtrado, vamos a demostrar el uso de las 3: primero daremos click en desocupado y ocurre esto:

Como podemos ver se pintan de gris oscuro los sitios que no cumplen con el filtro. Ahora damos click en Ocupado:

CONSEJO ACADÉMICO

Código: GUIA-PRL-001

RESULTADO(S) OBTENIDO(S):

- Lograr afianzar los conocimientos adquiridos sobre lo aprendido en el ciclo de la materia de Programación Aplicada.
- Aplicar buenas prácticas de programación.
- Aplicar patrones de diseño aprendidos en la materia de Programación Aplicada.

Formato: Guía de Práctica de Laboratorio / Talleres / Centros de Simulación

- Aplicar clases abstractas para así generar pseudocódigo para otras clases.
- Resolver problemas que se nos pueden presentar como programadores y encontrar su solución mediante la búsqueda en distintas fuentes.
- Utilizar JPA.

CONCLUSIONES:

En conclusión, este trabajo ha sido de mucha ayuda para practicar todo lo aprendido a lo largo de este ciclo. Además, Esto nos ayuda como futuros programadores para poder crear aplicaciones en tiempos cortos de producción. Además, mejoramos nuestras técnicas de programación. Esto también nos ayuda a lograr afianzar nuestros conocimientos sobre JPA.

RECOMENDACIONES:

No existe ninguna recomendación ya que todo fue explicado en clase.
